

"Percent Growth" refers to the percentage of the difference between a student score and 100%. The default is 25%. For example, if a student scores 180/240 on their first attempt, then the default growth target would be 25% of 240 - 180, or 25% of 60, which is 15. To change the target from the default of 25%, just overwrite the 25% with a number from 0% to 100%.

Percent Growth Target = 25%
